

Le Kit XCam 2 PIR

Your front door answering machine !

Benefits

The X-10 wireless camera uses the latest camera technology to bring you high quality colour pictures at a reasonable price.

With VCR Commander, you can record what is happening in your home when you're away. Imagine installing the XCam2 PIR by the front door before going on holiday and when you get back reviewing who passed by. Up to 16 XCam2 PIR cameras can be installed to give your home a complete coverage.

The PIR camera is easy to install - simply fix it to the wall and plug in the power supply.

The camera can be orientated for best viewing - in the baby room, by the front door, in the hobby room, and thanks to X-10's 2.4 GHz technology, it is wireless. As soon as the motion detector senses a movement, the video transmitter integrated in the camera sends the images to the video receiver plugged into your VCR. At the same time, the VCR commander activates the VCR's RECORD mode.

And when there is no motion anymore, the VCR commander activates the VCR's STOP mode (after 5 minutes).
